

IN THE SPECIFICATION:

Please replace the paragraph beginning on page 16, line 6 of the Specification with the following amended paragraph:

To move bots **601** from one module **701** to another module **702**, either a convex bridge **606** or concave bridge **607** can be used. Bridge **606** functions similarly to bridge **605** and is used to move a bot **601** between the far sides of two modules **701** and **702**, as illustrated in **Figure 7**. Bridge **606** could also be used if additional modules are placed between modules **701** and **702**, allowing a bot **601** to move directly from one far end of a battery of modules to another. Bridge **607** is used to move a bot **601** between facing sides of different modules **701** and **702**, as shown in **Figure 7**. Arrows 608 schematically illustrate bridges 605-607 connecting and disconnecting from modules 701 and 702. Bridges 605-607 are connected to track 602 by any of various types of connections that are well known in the art.
